

SPOTLIGHT**Cybershield 2.0 Availability Announced**

Bedrock Automation recently announced that we have extended our intrinsic cyber security protection to networks, the Industrial Internet of Things (IIoT) and third party applications. **Bedrock™ Cybershield 2.0** not only enables authentication and encryption of I/O networks and field devices, it now protects compliant networks and user applications such as controller configuration, engineering and SCADA.

Cybershield 2.0 Everything You Need to Know – In Just 2 Minutes

They say “A picture is worth a thousand words” -- an enduring truism. While we know cyber security can be a complex topic, our recently released **Cybershield 2.0** video is just the ticket to help convey how unique Bedrock's approach is and the value it brings. This short and sweet (2 min) overview of how and why intrinsic security protects your industrial assets from unauthorized intrusions was designed with sharing in mind!

ARCView on Bedrock Published

Cyber security is at the heart of every product Bedrock builds, and we've been pretty busy fleshing out the entire portfolio. However, we recently took time to brief ARC Advisory Group industry analysts on our cyber security philosophy and how that translates into those products. We're delighted with their conclusion, which in part reads, “ARC is not aware of any other supplier implementing a cyber strategy as stringent and comprehensive. In examining the current portfolio, the Bedrock engineers and architects are tackling cyber security in a more holistic fashion than many end users have considered. The message? Air gaps and firewalls are not enough.” [Get a free copy of their ARCView Here →](#)
