

October highlights, industry news, and happenings from Bedrock Automation.

Hello there,

Kudos to Joe Weiss for calling attention to the vulnerabilities of power supplies in his recent [Control Global](#) blog entry titled "*Data centers have been damaged and they are not being adequately cyber secured,*" in which he addresses dangerous hardware attack vectors that are not being adequately addressed. Field production reliability has always been dependent on the quality and availability of power but this has been downplayed in many cyber security initiatives, probably because no one quite knew what to do with it. At Bedrock, cyber securing smart power and backup power systems has been part of our OSA[®] platform from day one, as you can see from our [offerings](#) and our [white paper](#) on the subject.

On another note, it's award season again and Bedrock is once again in the running. Please know that recognition through these types of awards is important to our growing company and we appreciate the support that you have shown us over the years. See below for details on how to vote in the current programs.

Oil & Gas Engineering Magazine Product of the Year: Voting Extended

On the heels of last year's selection of Bedrock as an *Oil & Gas Engineering* Product of the Year, the magazine has selected Bedrock's OSA[®] Remote as a finalist for 2018. If you can find a few minutes to visit their site and vote for OSA Remote — before the November 9th deadline — we'd really appreciate it.
