

March highlights, industry news, and happenings from Bedrock Automation.

Hello there,

This month we focus on the benefits and technologies of secure remote operations management.

One of our customers is rolling out a large-scale OSA® automation upgrade, in part to enable secure remote operations. See our article that describes their choice. Also we announce availability of our updated platform specifications which contains technical data on our complete Open Secure Automation platform in only 70 pages! This is a manifest to the simplicity and the power of OSA®.

In these uncharted times, we remain faithful to our customers and country.

Respectfully,

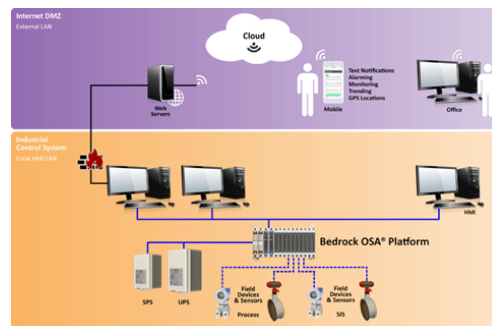

A handwritten signature in blue ink that reads "Albert".

### Remote Monitoring Comes of Age

While interest in monitoring geographically dispersed operations remotely has been advancing steadily, it has finally matured as a strategy for reducing costs and improving safety. This is especially relevant for the volatile oil and gas industry. Here we look at the benefits of remote monitoring from the perspective of an oil and gas industry management consulting firm and the U.S. Cybersecurity and Infrastructure Security Agency.

## Selecting a PLC Migration Partner

Anyone contemplating a PLC upgrade can learn a lot from the process that one of California's largest oil producers presented last month at the ARC Industry Forum.
